<USER_SETTINGS_CHANGE>

The user changed setting `Model Selection` from None to Gemini 3.1 Pro (High). No need to comment on this change if the user doesn't ask about it. If reporting what model you are, please use a human readable name instead of the exact string.

</USER_SETTINGS_CHANGE>

Assistant

I've investigated the project and fixed the issues you mentioned, while also completing the requested feature enhancements listed in the `README.md`!

LLM Chat History

Here is a summary of the fixes and implementations made:

1. **Bug Fix (`logic.py`) - Duplicate Symbol Issue**:
   - **The Bug**: The original `feedback` function allowed duplicate symbols in the guess to wrongly consume matching symbols multiple times, which resulted in inflated partial match counts.
   - **The Fix**: I rewrote the feedback logic to correctly tally exact and partial matches by explicitly filtering matched characters. The new function safely calculates partials on only the *remaining* characters without duplicate counting!

2. **Game Lifecycle Management (`game.py`)**:
   - Implemented clear win/loss message handling (`"Cracked the code! You win!"` / `"Game over! You lost. The code was ..."`).
   - Ensured that `turns` are properly tracked and state changes are prevented once the game finishes.

3. **Difficulty Modes (`game.py`)**:
   - Introduced difficulty options prompted at the start of the game: **Easy** (12 turns), **Normal** (10 turns), and **Hard** (8 turns with a 5-digit code and wider 1-8 symbol range). The feedback logic seamlessly handles all variable code lengths and symbol ranges.

4. **History & Robustness (`game.py`)**:
   - The game loop now presents a cleanly formatted guess history output after each valid move to track exact and partial feedback visually.
   - Invalid or malformed inputs are gracefully rejected (without consuming your turns), alerting the user of the exact formatting requirements based on their difficulty setting.

LLM Chat History

Feel free to run the game with `python main.py` to test out the new features and logic fixes! Let me know if you would like anything else adjusted.

User

<USER_REQUEST>

as mentioned in the readme i need to submit a llm chat history so create a pdf of it to submit
